

CS110 · ACTION 6A · REQUIRED WORKSHEET

C# Code Map

Label what the tutorial code does before you change what it says.

01 Run the tutorial first.

Follow [Ready to Code Some C# NET](#) in Visual Studio. When the app runs, use this sheet to name the parts. Your final pathway app may replace or extend “Hello World.”

Selected context

Use a technical context · Console Status Check

02 Find the parts.

Visual Studio note: A newer Console App may use top-level statements, which means the compiler supplies the Program class and Main method. Label the parts you can see and write “compiler supplies it” for hidden parts.

```
using System;
```

```
class Program
```

```
{
```

```
    static void Main()
```

```
    {
```

```
        Console.WriteLine("What is your name?");
```

```
        string userName = Console.ReadLine();
```

```
        Console.WriteLine("Hello, " + userName);
```

```
    }
```

```
}
```

Library	Class	Main method	Prompt	Input + variable	Output
---------	-------	-------------	--------	------------------	--------

03 Explain each label in your own words.

Class

A container that groups related code.

methods, properties, and variables, together in object-oriented programming.

Main method

The method where the console program begins.

run a program, the operating system or runtime environment automatically looks for and executes this method first.

Method / function

A named action. In C#, a function inside a class is called a method.

Console.WriteLine (Job: Displays a line of text in the console)

Variable

A named place that remembers a value.

remembers Concle.ReadLine()

Console.WriteLine

Displays a line of text in the console.

For example: Hello, World!

Console.ReadLine

Waits for typed input and returns that text.

It receives the plain text (string) that the learner types into the console before pressing the Enter key.

04 Trace the data.

INPUT

Any name or text (for example: "Ulises").

VARIABLE

username

OUTPUT

A greeting containing that name (for example: "Hello, Ulises" or whatever message your specific code is written to display).

o5 Plan your pathway version.

What will you replace or add after the tutorial app works?

Prompt the player to type their character's class (e.g., Warrior or Mage). Store the typed value in a variable called `characterClass`. Respond by displaying a message like "Welcome to the guild, [characterClass]!"

Optional ways to go beyond the tutorial

- ☐ Another prompt
- ☐ A decision or conditional
- ☒ ASCII art in the console
- ☐ An image in README.md
- ☐ Another tested feature

o6 Save the evidence.

1. Complete every written section.
2. Select **Print or save PDF**, or take clear screenshots.
3. Place the PDF or screenshots in your GitHub Week6/evidence folder.
4. Commit and push the worksheet with your Action 6A project checkpoint.
